AHA request for TK: this limit did not exist in older versions and does not exist in the query in the GUI. Why is this set? Makes no sense for Enterprise customers.

a) Can this be set to limit = none again?
b) Is there a workaround in the API to be able to display all projects?

limit
int32

The limit used to specify the maximum number of projects returned in the query results. Used for pagination in conjunction with the "bookmark" query parameter.

Possible values: 0 ≤ value ≤ 100

Default: 10
